Office Action Summary

Art Unit: 1734

DETAILED ACTION

Although the last office action had an attachment of an interview summary on 9/7/02, no summary of the interview was included in the amendment filed 1/23/02. It is noted that a formal written reply must-include-the substance of an interview (see MPEP 713.04).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 53 and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Strandberg 3,207,125.

Strandberg teaches the design of an apparatus for preparing a fabric comprised of a means for mounting a first supply roll having a strip of fabric wound around a beam or shaft; liquid treatment applying means for applying liquid treatment material which includes a known solvent, water, to form a soaked strip of fabric; a means for forming a soaked/impregnated and dried strip of fabric, and an excess liquid treatment means which includes elements 8 and 9 which are interposed between the solvent or liquid treatment applying means and the second supply roll. Strandberg teaches the squeeze rollers 8, 9 have means for adjusting nip pressure therebetween such that strip of fabric is saturated to functional equilibrium obviously dependent on the nip pressure. The recitation solvent is an organic solvent does not structurally further limit the

Art Unit: 1734

apparatus since the Strandberg liquid treatment applying means is capable of applying a variety of liquid treatments to the fabric including those which would include an organic solvent.

Claim 54 is rejected under 35 U.S.C. 103(a) as being unpatentable over Strandberg 3,207,125 in view of Zimmer.

Strandberg is applied for the reasons. Strandberg fails to teach the solvent applying means includes a solvent supply roll and application roller mounted in the manner set forth in claim 54. However, it would have been obvious given the modification of the Strandberg apparatus as discussed above by substituting its immersion roll with the combination of application roller and supply roller such as taught by Zimmer for the obvious advantage of greater control of the textile treating material applied to the web.

Claim 56 is rejected under 35 U.S.C. 103(a) as being unpatentable over Strandberg 3,207,125 in view of Wenger.

Strandberg is applied for the reasons noted above. Strandberg fails to disclose that the squeezing roller is juxtaposed with the dipping roller and submerged in the solvent. However, it would have been obvious to modify the Strandberg apparatus so as to provide a squeezing roller which is juxtaposed with the dipping roller and its lower portion submerged in the solvent/liquid such as taught by Wenger for the taught advantage of increased rate of size impregnation.

Claims 51-52 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one

Application/Control Number: 09094991

Page 4

Art Unit: 1734

skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The originally filed specification fails to teach or suggest the pair of rollers are adjustable in temperature.

Claims 46 and 48-49 are allowed.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication should be directed to Brenda Adele Lamb at adel Lums telephone number 308-2056.
